PROJECT EXPERIENCE

GLENWOOD SPRINGS DOWNTOWN PLAN

GLENWOOD SPRINGS, COLORADO (COMPLETED)

The Glenwood Springs downtown is bisected north-south by a state highway (SH 82) carrying over 30,000 cars a day and east-west by I-70, the Colorado River and a mainline railroad. Charlier Associates, working with Clarion Associates, provided traffic, transit and pedestrian system evaluation and plan development services for a new comprehensive downtown plan. To help the City address traffic issues on Grand Avenue ("main street" and also the current route of SH 82), CAI conducted a two-day traffic count and license plate matching project that provided the basis for an assessment of the potential utility of a proposed bypass of the downtown.
