PROJECT EXPERIENCE

TRANSPORTATION, CIRCULATION & MAIN STREET RECONSTRUCTION PLAN BRECKENRIDGE, COLORADO (COMPLETED)

Charlier Associates develop a multimodal transportation plan for the Town of Breckenridge, in association with Vail Resorts, to address the redesignating the state highway (COHWY 9) from their Main Street to a bypass (Park Avenue).

Key project recommendations include:

- *a traffic and circulation plan that encourages access to local business and creates efficiencies for transit and pedestrians;*
- *plans to develop an intermodal center to facilitate transfers between local bus routes, regional bus routes, a proposed mountain gondola;*
- *access and circulation plans for a 2,000-space parking facility at the intermodal center;*
- *multimodal connections to local and regional pathways; and,*
- *restructured in-town transit routes to provide more efficient and direct routing to popular destinations.*

The work involved close consultation with a project advisory committee composed of representatives from the CDOT, the Town of Breckenridge, Breckenridge Ski Resort and local businesses. A series of interactive community workshops were as hosted as part of the process. The meetings used creative agendas and materials to capture citizen's interest and build consensus.
