

### **SANTA FE RAILYARDS REDEVELOPMENT**

**SANTA FE, NEW MEXICO (COMPLETED)**

*As a sub-consultant to Design Workshop, Inc. Charlier Associates is providing multimodal transportation expertise on the redevelopment of the existing Santa Fe Railyard site. The project involves coordination with a variety of neighborhood interest groups, local businesses and the Burlington Northern Santa Fe Railway. One of the critical issues associated with the project is the connection to the local Rail Trail. The Rail Trail connects Santa Fe to the Town of Lamay (18 miles to the south) using a dedicated trail adjacent to the active Burlington Northern Santa Fe rail line. The Rail Trail is a mixed-use facility that serves a popular attraction to cyclists in the region. Charlier Associates is developing a multimodal circulation plan for the railyard area that focuses on using the Rail Trail and other multimodal solutions to reduce the parking demand in the railyard.*
