

# Charlier Associates, Inc.

## PROJECT EXPERIENCE

### MULTI-AGENCY CAMPUS (MAC)

JACKSON, WYOMING (ON-GOING)

Charlier Associates, Inc. was part of a multi-disciplinary team that developed a conceptual plan for the Multi-Agency Campus (MAC) in Jackson, Wyoming. The MAC is home to the regional headquarters for the Bridger-Teton National Forest and the Wyoming Game and Fish; visitor-orientation and reception functions for the Jackson Hole area attractions, including the Grand Teton National Park (GTNP); the Jackson Hole Historical Society and Museum; a 250-seat amphitheater; a 150-seat auditorium; the Elk Refuge and wildlife center; and a three-star hotel. In addition, the MAC serves as a pedestrian attraction for tourists in the downtown area and a transit center for in-town routes and service to GTNP.

CAI addressed a variety of transportation issues associated with the project, including: pedestrian, transit and vehicular access to and circulation within the site; the pedestrian and transit-rider environment; parking supply; and traffic issues. An important component of the overall project was the development of a shared parking demand analysis for the activities expected to occur on the site. CAI's site design and parking supply recommendations, derived from the analysis, played a key role in developing the final site plan and securing funding for the project.
